

Part M: Prompt Log

Designing Verification Checkpoints to Mitigate Silent Errors in Agentic AI Pipelines

Name: Jahanvi Mishra | Roll No.: MNS2026004 | Tool used: Prism (LaTeX conversion)

The table below records the meaningful, task-specific prompts used with Prism while converting the manuscript into LaTeX, along with whether each output was accepted, modified, or rejected after manual verification against the original paper.

Table: Prompts Used

No.	Task	Prompt Used	Accepted / Modified / Rejected
1	Text-to-LaTeX	“Convert this section into properly structured LaTeX. Preserve paragraph order, citations, terminology, equations, and all technical details. Do not summarize and do not introduce new content.”	Accepted with minor formatting verification
2	Equation conversion	“Convert the following equation into valid LaTeX. Preserve the mathematics exactly. Then list the meaning of each variable and flag any ambiguity instead of guessing.”	Accepted with verification/correction where required
3	Table conversion	“Convert this table into publication-quality LaTeX. Preserve every row, column heading, unit, decimal value, and result exactly. Do not round, reorder, or reinterpret any value.”	Accepted after cell-by-cell verification
4	Debugging	“Explain this LaTeX compilation error. Identify the likely cause, show the minimum correction required, and explain why the correction works. Do not rewrite unrelated parts of the document.”	Accepted and corrections applied
5	Scientific writing	“Improve the clarity, conciseness, grammar, and scientific tone of this paragraph. Preserve all technical terminology, citations, numerical values, causal claims, limitations, and scientific meaning. Do not introduce new claims.”	Accepted after manual verification
6	Consistency check	“Review this manuscript for consistency in terminology, abbreviations, variable names, mathematical notation, dataset names, model names, capitalization, units, figure references, table references, and citation style. Report inconsistencies only. Do not rewrite the manuscript.”	Accepted as consistency report

Note

Every prompt above was written to be precise and task-specific rather than a generic “fix this” or “write this” instruction, in line with the assignment's requirement. Each Prism output was checked against the original research paper before being accepted into the final manuscript.
